

## Market Advisory

### Canadian Tongue and Groove Plywood Products

CANPLY EASY T&G™ is considered Canada's "standard" in plywood T&G (tongue and groove) products. After 20 years in Canadian and international markets, CANPLY certified plywood with this patented, precision-engineered tongue and groove profile has been proven to:

- Enable fast, problem-free installation
- Prevent buckling by accommodating panel expansion due to moisture changes
- Prevent wedging action that exert damaging splitting forces
- Accommodate field applied adhesives
- Provide a uniform, ridge-free adjacent panel surface

**CANPLY EASY T&G™ roof and floor plywood panels should NOT be mixed with any other T&G panels.**

Risks in mixing T&G profiles that do not exactly conform to the patented characteristics, shape, and dimensional tolerances of EASY T&G are:

- Inexact fit between panel tongue and groove edges that defeat design attributes
- Unmatched profile indexes that prevent a uniform, ridge free surface
- Squeaking at panel joints
- Voiding of expressed or implied warranties
- Irreparable customer dissatisfaction

Look for this Mark:

Specify **CANPLY EASY T&G™** to ensure getting the plywood T&G product demanded or expected by the vast majority of the Canadian marketplace. It is engineered to be the finest structural panel on the market today, is made from trees harvested from managed sustainable forests, and is exclusively manufactured by member companies of CertiWood™.
